

3 Signs your computer needs a Tune-Up

1. Computer Freezes.

When your computer freezes it can be browser troubles, low memory, programs acting up, viruses or adware. Most of these symptoms have low or no cost resolutions.

2. Speed.

Many times too many programs start to run at the same time and on occasion installed programs “fight” with each other causing errors within your computer. The most common slow down involves two or more anti-virus softwares scanning at the same time. We can help!

3. BSOD.

Also known as the Blue Screen Of Death, this error can happen when you have a corrupt operating system, registry problems, or viruses. It can also mean that a piece of hardware within your computer has failed and needs to be fixed or replaced.

These problems are easily fixable through a tune-up process. Keep in mind ignoring these signs can cause further damage to your computer. From Tune-Ups to buying a new computer, we are here to help.
